SUBJECT: First Round of Groundwater Sampling Tentative Schedule at Rhone Poulenc

PROJECT: SEA35051.A5

This is a tentative groundwater sampling schedule that has been constructed for the benefit of the groundwater sampling field crew and the laboratory. It is anticipated that that the number of samples collected per day may vary depending on field conditions. It is important that we try to stick to the order of the scheduled work so that the laboratory has an idea of how many samples will be collected and what analyses will be required each day.

A tentative first round of groundwater sampling schedule is presented below. The sampling will start with wells in the offsite portion of the site (least contaminated) and will end with wells in the most contaminated investigation area (A4).
